

Prospr Herbicide

Attachments

Precision herbicide application
that reduces waste and
improves consistency.

Weed control shouldn't slow you down. This advanced herbicide spraying implement is built to integrate seamlessly with Prospr so you can switch tools quickly and extend automation across your operation. It delivers precise control, while intelligent systems handle nozzle operation, liquid monitoring, and real-time rate adjustments.

Key Features

- Automation does the heavy lifting**
The system manages critical spraying functions on its own, activating nozzles, agitating the tank, sensing liquid levels, and adjusting application rates based on vehicle speed. The result is a more consistent application, less waste, and better outcomes across every pass.
- Built for the realities of the field**
Mechanical breakaway boom arms are designed to absorb impact and protect both your equipment and your crops, whether you're working around trees, vines, or posts. Built to perform even when conditions are unpredictable.
- Flexibility where it matters**
Mix chemicals directly in the main tank or opt for inline dosing to control concentration with precision. It's a smarter way to manage inputs to reduce waste, improve accuracy, and give you control.

Product Variations

All variations feature the Yamaha Agriculture management and planning interface with multi-vehicle remote (MVR) console for operators.

**Standard — H1S
Standard with Doser — H1SD**

Spray Tank Volume	1,514L / 400 gal
Height	2,370mm / 7.78ft
Length	2,940mm – 3,553mm 9.65ft – 11.35ft
Width	3,460mm / 11.35ft
Weight (Empty)	600kg
Application Rate	200 – 500L/Ha (26 – 50gal/acre)
Spray Width	Up to 2,540mm

**Wide — H1W
Wide with Doser — H1WD**

Spray Tank Volume	1,514L / 400 gal
Height	2,370mm / 7.78ft
Length	2,570mm – 3,442mm 8.43ft – 11.43ft
Width	3,240mm / 10.63ft
Weight (Empty)	650kg
Application Rate	200 – 500L/Ha (26 – 50gal/acre)
Spray Width	Up to 4,000mm

Growing the future of agriculture together.
